Melbourne Vic 3001

Reference G40703.

Please change my address for correspondence.

Dear Sir,

On the 12th December 2004 I wrote to you requesting additional documents filed by my daughters and received no reply from you.

I have been diagnosed with mercury poisoning severe enough to be causing panic attacks and anxiety that could lead to a diagnosis of dementure. I have never had amalgam dental fillings in my life.

In about June 2003 I saw her doctor about severe hair loss, which is a symptom of mercury poisoning. It would or can be estimated that this poisoning event happened before this time at about March, April, May of 2003. Faye Johnson - my daughter gave me some vegetable juice that scolded my throat and made it severely sore. She blamed the red beet root that she had put in that juice and I at the time accepted that I must be allergic to raw red beet root. My throat was sore for about two months and was still sore when my son arrived from Queensland on the 5th May 2003. I also had severe heart arrhythmias which is another symptoms of mercury poisoning and can also cause blood clots that can cause heart attacks and strokes, I had two strokes after this poisoning episode. This poisoning has been causing me to be very weak – frail and considerable mental anxiety. I have normally been able to cope with all difficult situations in my life and ran a pub for seven years without difficulty. The mercury poisoning has considerably disabled me.

Faye has told many people that I was demented, These people include locals such as Ian Nadenbush, Police, and my family Lola Miller, Merle Rapley, Joe Dows, Laney Stevens his daughter, John Girlach, and others including your tribunal..

Three times Faye went and talked to Lynette's doctors, the last being Dr. Dhillon in Bunyip. Dr. Dhillon told Lynette that Chelation, which is a treatment for heavy metal poisoning, was not good for her and she should not be having it. Faye has somehow had "inside knowledge" about me having dementure and has even made these claims to the Guardianship tribunal.

I suggest that Faye poisoned me for the purpose of gaining control over my assets and taking them all. Faye lived at Bunyip with my husband and I who has since died. I have informed the Police and will be having my husband examined for heavy metal poisoning. Faye had opportunity and motive. She has also demonstrated an inside knowledge that is consistent with the symptoms of mercury poisoning of me, her mother. This is not the only thing she did to damage me either.

Mercury poisoning symptoms

1. Psychological Disturbances

(erethism) Irritability, Nervousness, Fits of Anger, Memory Loss, Lack of Attention, Depression, Low Self Confidence, Anxiety, Drowsiness, Shyness/timidity, Decline of Intellect, Insomnia, Low Self Control.

2. Oral Cavity Disorders

Bleeding Gums, White Patches - Mouth, Stomatitis, Bone Loss Around Teeth, Loosening of Teeth, Ulcers of Gums- Palate- Tongue, Excessive Saliva, Burning of Mouth, Foul Breath, Gum Pigmentation, Metallic Taste.

3. Gastrointestinal Effect

Abdominal Cramps, Colitis, Crohn's disease, Gastrointestinal Problems, Diarrhea.

4. Systemic Effects

Cardiovascular, Irregular Heart Beat, Changes in Blood Pressure, Feeble or Irregular Pulse, Pain or Pressure in Chest

5. Neurological

Chronic or Frequent Headaches, Dizziness, Ringing or Noises in Ears, Fine Tremors (Hands, Feet, Eye Lids, Tongue)

6. Respiratory

Persistent Cough, Emphysema, Shallow or Irregular Breathing.

7. Immunological

Allergies, Asthma, Rhinitis, Sinusitis, Swollen Lymph Nodes in Neck

8. Endocrine

Subnormal Temperature, Cold Clammy Hands & Feet, Excessive Perspiration, Muscle Weakness, Fatigue, Hypoxia, Edema, Loss of Appetite, Loss of Weight, Joint Pain

"...The primary symptoms of mercury-poisoning are vague psychic ones. Short-time memory deteriorates. You will find it difficult to concentrate on tasks, which require attention and thinking. It is easier to execute tasks that are well known rather than to learn something new. You avoid social contacts, which demand that you get out of your introvert behavior. You lose your temper easily and switch between different moods for no particular reason. Little by little, a more physical kind of exhaustion is added to the condition. More and more effort is required to initiate activities and sometimes break things due to inability to co-ordinate your movements with your visual impressions (ataxia). Occasional headaches, minor involuntary muscle spasms or ticks within groups of muscles can also appear. Hands and feet become easily cold, attacks of dizziness or vertigo can occur, and periodically you may find it difficult to focus your eyes and to see clearly. Joint and muscle pains, stiffness, lumbago and similar symptoms often appear at an early stage. They can be caused or increased by low availability of the trace element selenium. Nervous heart, sometimes accompanied by a weak pulse, sometimes by a hard pulse, creates a feeling of anxiety. You don't sleep well, you wake up stiff and never feel thoroughly rested. As a whole you need more sleep than before, and you are constantly tired. Some individuals develop pronounced intestinal and stomach disturbances. Bloating is common and diarrhea can alternate with constipation. From 50 to 200 micrograms mercury from amalgam daily passes the gastrointestinal tract. There is usually irritation where mercury first interacts with tissues. The upper respiratory

tract easily becomes chronically inflamed and symptoms in mouth appear. The gums bleed when you brush your teeth, red and white irritations (lichen, leukoplakia) arise, blisters and sensitivity to certain nutritive develop, your teeth ache, the whole jaw can become more or less inflamed, and some persons develop sinusitis. Metal taste in your mouth is a direct sign of metal-poisoning (mercury, copper). The more poisoned you are, the more serious and chronic your problems become. The pituitary gland will be affected which often leads to frequent urination. When the thyroid gland is affected secondary effects on metabolism can appear. Both glands accumulate mercury. neurological symptoms such as numbness, hypersensitivity and paralysis exacerbate. It is often hard to determine if the cause is in the nervous or circulatory systems..."

I have had most of these symptoms.

Yours sincerely

Lynette Croll
